An algorithm is a list of instructions for accomplishing a task. We follow algorithms everyday when it comes to activities like making the bed, making breakfast, or even getting dressed in the morning.

These images are not in order. First, describe what is happening in each picture on the line to its left, then match the action to its order in the algorithm. The first one has been done for you as an example.

Sometimes you can have more than one algorithm for the same activity. The order of some of these steps can be changed without changing the final product. Use the letters on the images below to create two algorithms for making a paper airplane.

ALGORITHM 1: C    F    A    D    G    H    B    E

- Tell students that just as they should stay safe in the real world, they should stay safe when they go into the online world (visiting websites). Make parallels between the answers students gave you about their neighborhood and the online world.

Play [Pause and Think Online](#) video.

- Introduce the idea that there are three different kinds of websites that students may have the opportunity to visit.
  - Green: A “green” website is:
    - A good site for kids your age to visit
    - Fun, with things for you to do and see
    - Has appropriate words
    - Doesn’t let you talk to people you don’t know
  - Yellow: A “yellow” website is:
    - A site you are not sure is right for you
    - One that asks for information such as who you are, where you live, your phone number or email address, etc.
    - A place where you are allowed to communicate freely with others
  - Red: A “red” website is:
    - A site that is not right for you
    - A place you might have gone to by accident
    - Filled with things that are for older kids or adults
  - Discuss examples of each of these kinds of sites.

#### LESSON TIP

*If you have access to a computer, feel free to navigate to sites that might showcase each of these types (using extreme caution with your RED selection).*

Now, let's see what we can do to keep ourselves safe.

Figure out how to play this game by looking at the players' phrases below. Circle the matching parts and underline words that are different from player to player. The first matching section has been circled for you.

**Player 1:**

"I chose a lion, and rolled a six, then a four, then a two. That means I need to draw a black cupcake on my lion's tail."

**Player 2:**

"I chose a donkey, and rolled a three, then a two, then a one. That means I need to draw a yellow pineapple on my donkey's head."

**Player 3:**

"I chose a puppy, and rolled a five, then a three, then a five. That means I need to draw a pink salmon on my puppy's nose."

Using pattern matching and abstraction, make yourself a template for game play by writing up the circled parts of the other students' experiences, and leaving the underlined sections as blanks.

- Point out that different people in the class may have different supplies, and they may all be different than the ones you used.
  - Ask if that should stop them from following the program.
    - Why not?
  - We can treat the words (Bead, Spacer, Knot, etc.) as "placeholders" for whatever items we are using that fit those descriptions.
  - These are called **variables**

6) Let the students get started on their suncatchers!

## WRAP-UP (5 MIN)

### 5) Flash Chat: What did we learn?

- What items did you use that could have been "variable" from person to person?
- How important do you think it was to have groups of skills that we could call for this lesson?
- What if we had done each set of steps 100 times instead of only twice?
- Can you think of anything else that we could group together once and call easily over and over again?
  - What about the chorus of a song?

#### LESSON TIP

*Flash Chat questions are intended to spark big-picture thinking about how the lesson relates to the greater world and the students' greater future. Use your knowledge of your classroom to decide if you want to discuss these as a class, in groups, or with an elbow partner.*
