

2021 State of Computer Science Education

Nationally, just 51% of high schools offer computer science, up from 35% in 2018. This represents tremendous progress by teachers, school leaders, policymakers, and other advocates. But given the significance of computing in today's society, it is not enough for half of schools to lack even a single course. New data reveals disparities in who has access to and who participates in computer science education.

Over the past year, U.S. students, teachers, and families faced unprecedented challenges, making it more important than ever that computer science becomes a sustained part of the education system. Computer science supports the development of problem solving, creativity, metacognition, spatial skills, reasoning skills, and improvements in reading, writing, mathematics, and science test scores. Increasingly, computer science is recognized as a core literacy for students.

Students who attend rural schools, urban schools, or schools with higher percentages of economically disadvantaged students are less likely to have access to computer science. States are working to broaden access and participation in computer science with policies to make computer science a fundamental part of the K-12 education system.

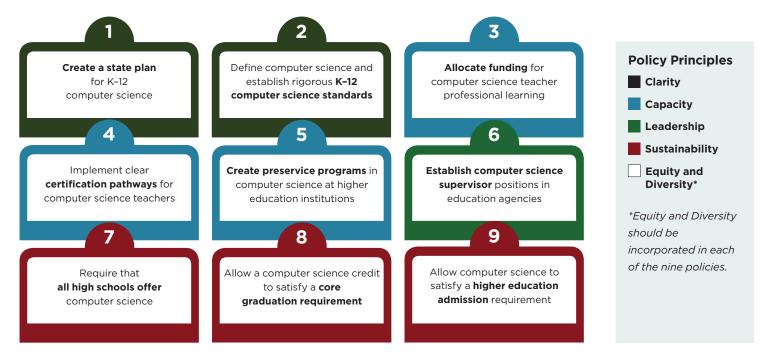

States that adopt **more of the nine policies** shown below have a greater percentage of high schools offering computer science.

Female students make up 49% of the elementary students enrolled in computer science, 44% of the middle school students, and only 31% of high school students.

Although 78% of U.S. high school students attend a school that offers foundational computer science, **only 4.7% of students are enrolled in a course**.

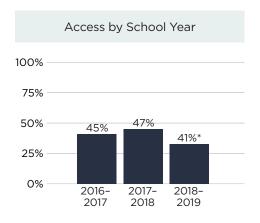

Pursuing policies that expand access to K-12 computer science provides policymakers a rare opportunity to address equity, workforce, and education issues on a bipartisan basis.

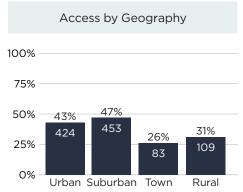

Nine Policies to Make Computer Science Fundamental

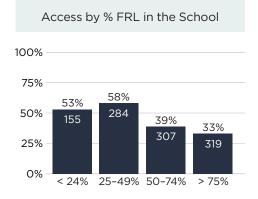

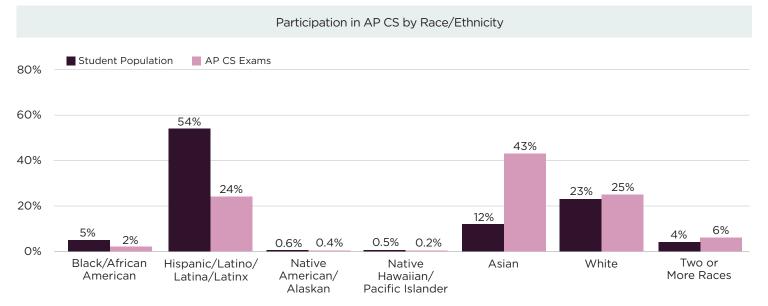

Percentage of Public High Schools Offering Foundational Computer Science

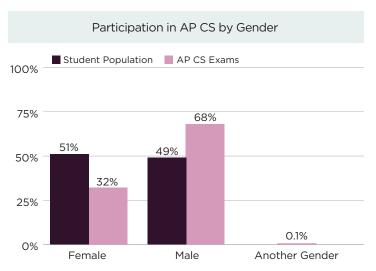

Participation in AP Computer Science by Demographic

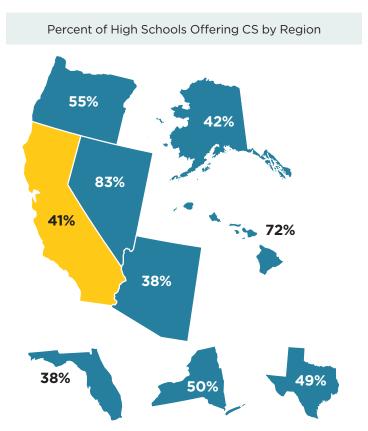

75% of CA high school students attend a school that offers computer science. Of 32,263 total AP CS exams taken in California last year, 32% were female and 0.08% identified as another gender. Black/African American students and Native Hawaiian/Pacific Islander students are both four times less likely than their white and Asian peers to take an AP CS exam. Similarly, Hispanic/Latino/Latina/Latinx students are three times less likely to take an AP CS exam than their white and Asian peers.

State policy should provide clarity, school and state capacity, leadership, sustainability of computer science initiatives, and promote access to and equity within rigorous and engaging computer science courses.

California has averaged

75,905

open computing jobs each month

These open jobs have an average salary of

\$115,754

Yet there were only

7,311

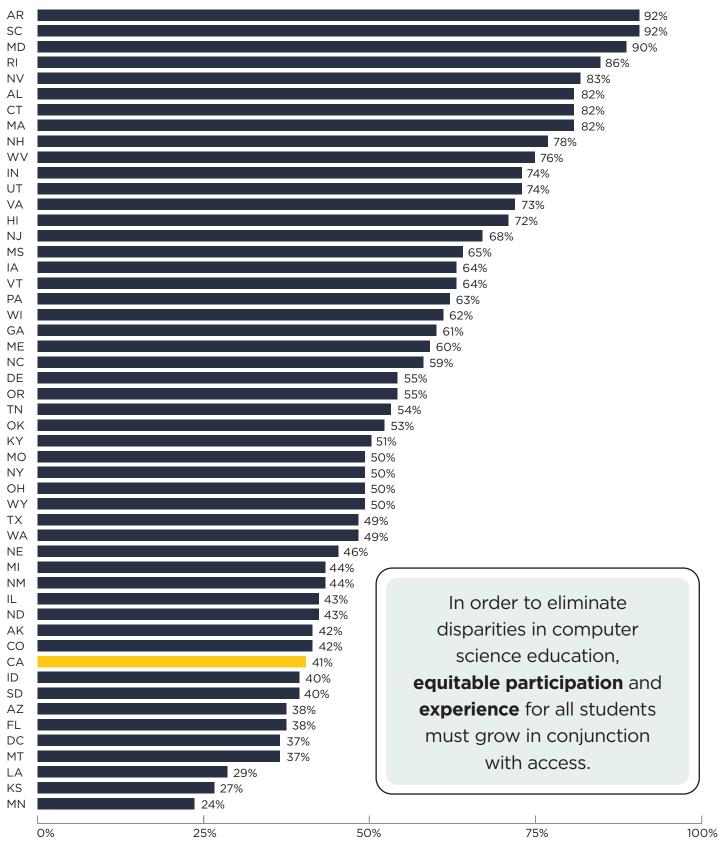

graduates in computer science in 2018

Did you know...

75% of CA high school students attend a school that offers computer science.

High Schools Offering Computer Science by State
