

2021 State of Computer Science Education

Nationally, just 51% of high schools offer computer science, up from 35% in 2018. This represents tremendous progress by teachers, school leaders, policymakers, and other advocates. But given the significance of computing in today's society, it is not enough for half of schools to lack even a single course. New data reveals disparities in who has access to and who participates in computer science education.

Over the past year, U.S. students, teachers, and families faced unprecedented challenges, making it more important than ever that computer science becomes a sustained part of the education system. Computer science supports the development of problem solving, creativity, metacognition, spatial skills, reasoning skills, and improvements in reading, writing, mathematics, and science test scores. Increasingly, computer science is recognized as a core literacy for students.

Students who attend rural schools, urban schools, or schools with higher percentages of economically disadvantaged students are less likely to have access to computer science.

States are working to broaden access and participation in computer science with policies to make computer science a fundamental part of the K-12 education system.

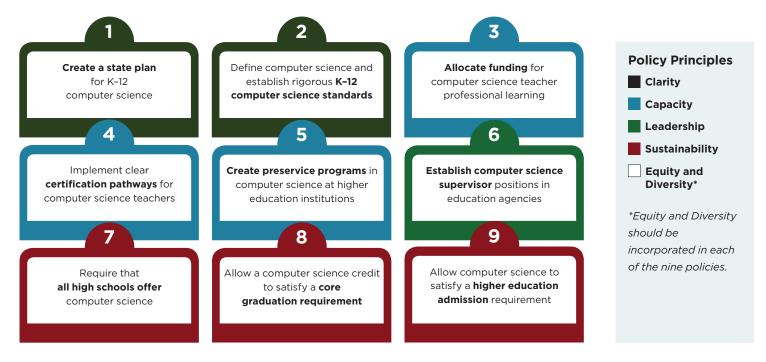

States that adopt **more of the nine policies** shown below have a greater percentage of high schools offering computer science.

Female students make up 49% of the elementary students enrolled in computer science, 44% of the middle school students, and only 31% of high school students.

Although 78% of U.S. high school students attend a school that offers foundational computer science, **only 4.7% of students are enrolled in a course**.

Pursuing policies that expand access to K-12 computer science provides policymakers a rare opportunity to address equity, workforce, and education issues on a bipartisan basis.

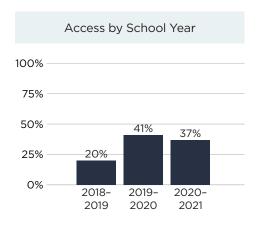

Nine Policies to Make Computer Science Fundamental

District of Columbia

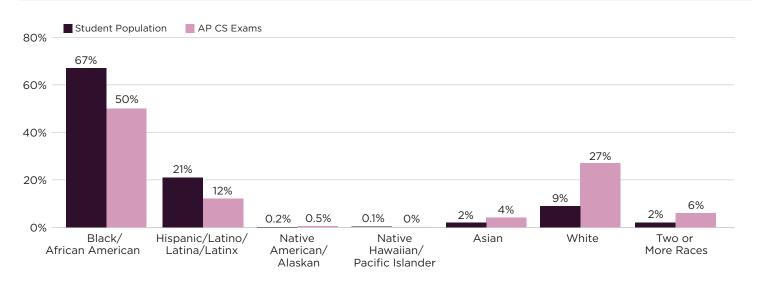

Percentage of Public High Schools Offering Foundational Computer Science

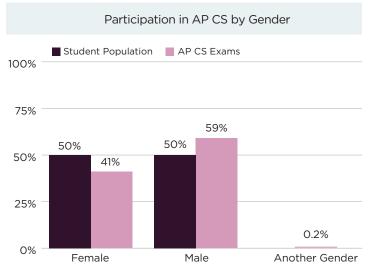

Access data provided primarily by the Office of the State Superintendent of Education and school catalogs, based on 43 schools with high school grades. All schools are in urban geographic areas.

Participation in AP Computer Science by Demographic

Participation in AP CS by Race/Ethnicity

51% of DC high school students attend a school that offers computer science. Of 424 total AP CS exams taken in DC last year, 41% were female and 0.1% identified as another gender. Hispanic/Latino/Latina/Latinx students are half as likely as their white and Asian peers to attend a school that offers AP CS and half as likely to take an AP CS exam. Black/African American students are 3.6 times less likely than their white and Asian peers to attend a school that offers AP CS. No Native Hawaiian/Pacific Islander students and only two Native American students took an AP CS exam.

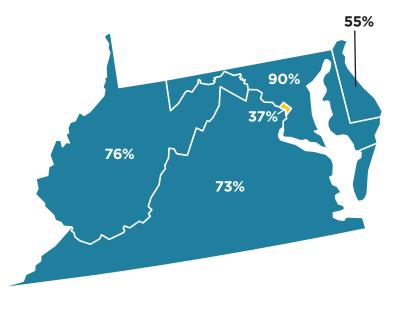

District of Columbia

State policy should provide clarity, school and state capacity, leadership, sustainability of computer science initiatives, and promote access to and equity within rigorous and engaging computer science courses.

Regional Comparison of Computer Science Education Policy Adoption

POLICY	DC	DE	MD	VA	WV
State CS Plan			✓		✓
K-12 CS Standards		✓	✓	✓	✓
Funding for Teacher PD			\$8M	\$7.4M	\$2.4M
Teacher Certification	✓		✓	✓	✓
Preservice Programs			✓	✓	
State CS Supervisor			✓	✓	✓
All High Schools Offer		✓	✓	✓	✓
Graduation Credit	✓	✓	✓	✓	✓
Higher Ed Admission			✓		

Percent of High Schools Offering CS by Region

The District of Columbia has averaged

9,456

open computing jobs each month

These open jobs have an average salary of

\$114,152

Yet there were only

214

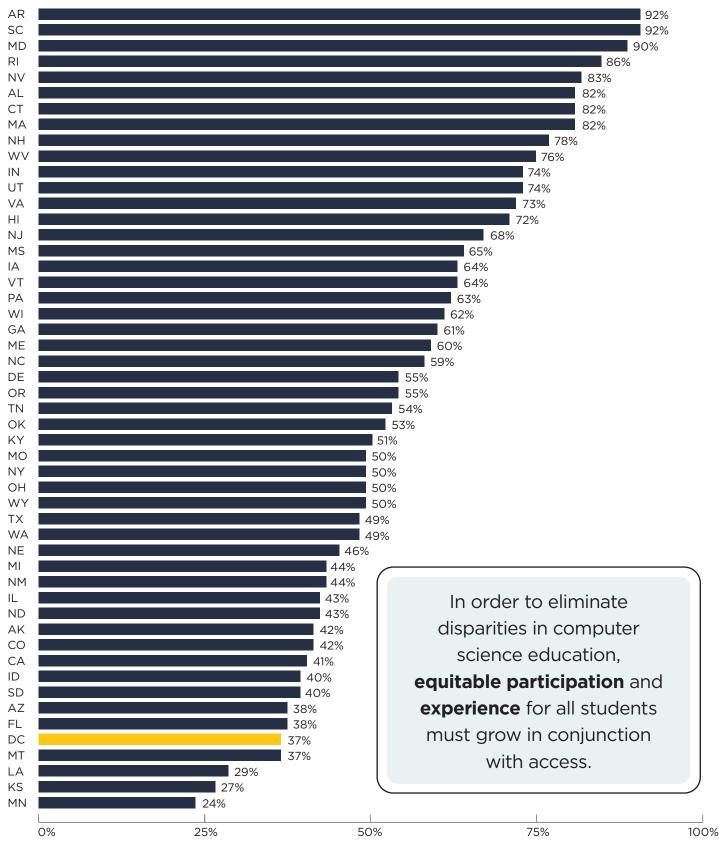

graduates in computer science in 2018

Did you know...

51% of DC high school students attend a school that offers computer science.

High Schools Offering Computer Science by State
